2. SYSTEM DIAGRAM

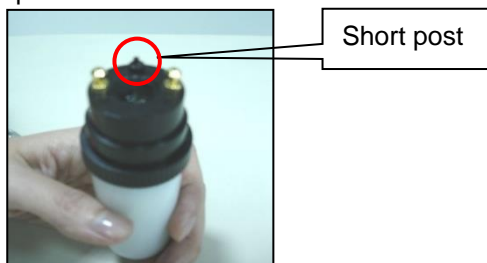

3. ATTACHING LENS TO HANDY PROBE

3-1 ATTACHING LENS TO HANDY PROBE

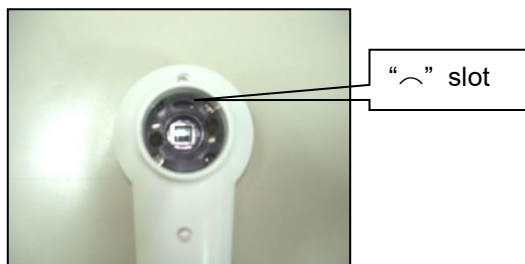

(1) Take off the anti-dust cover of the handy probe.

(2) Find the short post on the lens.

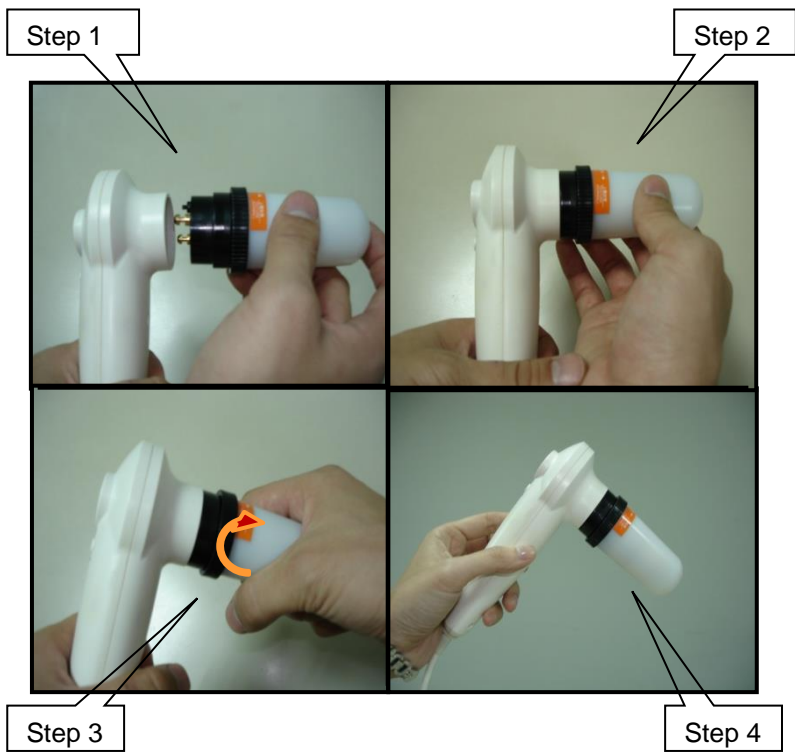

(3) Look at the front side of handy probe, you will find there's a “ \frown ” shape slot.

(4) Match (plug in) the post to the “ \frown ” shape slot to ensure they are fully combined. Turn clockwise to screw on the lens, anti-clockwise to screw off the lens.

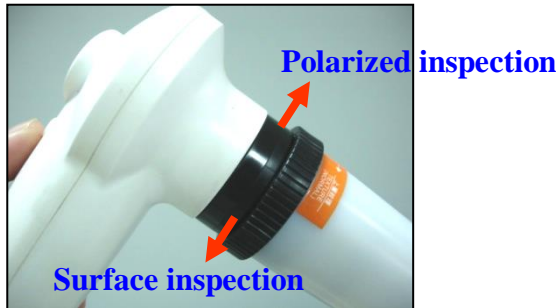

4. OPERATION OF OPTIONAL LENSES

(1) 50x Polarized lens

You can rotate the black rubber ring anti-clockwise to make surface skin inspection; rotate the black ring clockwise you can make deeper layer skin inspection.

(2) Normal 50x and 200x lens

The lens has been well adjusted the focus. You can slightly contact skin or hair for image capture.

(3) 1x focus adjustable lens (for styling purpose)

The focus range for this lens is adjustable. You can rotate the black ring clockwise or anti-clockwise to get the right focus of full face/body, half body, or partial face).

* This lens does not consist any inside LED lamp, therefore getting enough environmental outer light source is required.

(4) 650x lens (for hair cuticle inspection)

The focus for this lens is adjustable. You can rotate the black ring clockwise or anti-clockwise to get the right focus to inspect the hair cuticle.

(5) 50RN(UV) lens

This lens is specially designed for ACNE inspection. It needs to be applied under "HD-Pro Video Master" software.

* Under the UV light of 50RN(UV) lens, the acne will appear in fluorescent brown or red color. It is very useful in observation.

(6) Iris lens (for iridology analysis)

The focus range for this lens is adjustable. You can rotate the black ring clockwise or anti-clockwise to get the right focus of the iris image.

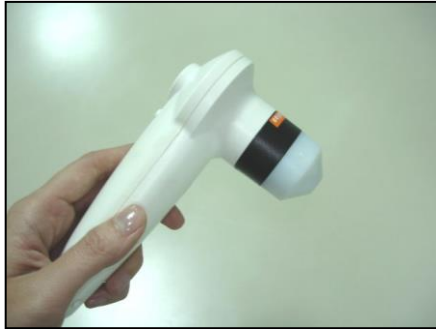

Anti-infection cap, please attach it on the top side of the lens.

The operation of iris diagnosis.

(7) Microcirculation lens --- for observing the thickness, shape of the blood vessels, the speed of blood flow of the nail-tip.

(a) Suggested test part: left ring finger, see the picture for available area.

(b) Operation method:

Please apply penetrating oil (vegetable oil) on the test part in order to get clearer image.

Method 1: Hand hold operation

You can hold the handy probe, contact the lens to the available area of left ring finger

[\(Refer to operation in next page\)](#)

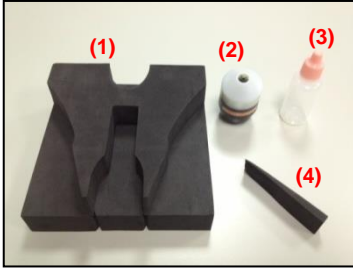

Method 2: Easy stand operation

You can also fix the handy probe on a stand, adjust the working distance to get right focus & clear image.

320x Microcirculation Lens Application

1. Standard package

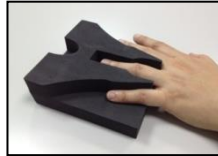

- (1) Finger supporter (Probe stand) ×1 pc
- (2) 320x Microcirculation lens×1 pc
- (3) Empty bottle ×1 pc
(Please add vegetable oil)
- (4) Slope plate to adjust finger height ×4 pcs
- ※ **Optional: “HD-Pro Video Master program”**
which gives good **image capture & video recording** for microcirculation condition observation

2. Usage of Finger supporter

Put the testing finger inside the supporter

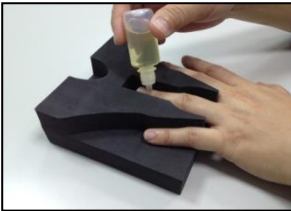

Please insert the slope plate in the supporter
(If the finger is thicker, the slope plate might be unnecessary.)

You can move the testing finger backward & forward to find the best view position.

(Ref: 3. Operation of microcirculation inspection)

3. Operation of Microcirculation Inspection

Please apply vegetable oil on the finger (suggested test part: left ring finger, just near to the nailfold), oil applied area about 1cm².

Hold the HD-01 handy probe with 320x lens, contact the lens to the applied area.

You can get right focus & clear image by adjusting the probe in a slight slope or moving finger backward & forward

4. The operating position between the operator & the tested

Please hold the handy probe in a parallel direction of the tested finger, then the microcirculation image will be in forward direction to facilitate the microcirculation shape and dynamic observation.

5. Put the handy probe back to probe stand

5. Connection to PC --- 2 free Capture programs

HD-01e provides UVC (USB Video Class) camera, USB plug & play, no USB driver needed!

- * System requirement: a. IBM compatible PC
- b. CPU: 2.0GHz Dual-Core
- c. Intel® Core™ i3 Processor or above
- d. HDD: 500G or 1TB or above
- e. RAM: 4GB DDR4 or above
- f. Display resolution: 1366x768 (1920x1080 better)
- g. USB port: 3.0*1, 2.0*2

* Required OS: Windows 7, 8 & Windows 10

*** Remark: HD-01e is with high resolution images for 640x480 VGA mode.**

5-1 Power on your IBM compatible computer. Insert “HD-01e Easy Scope” CD-R into the CD-ROM drive.

5-2 The CD-R will auto-run or click “My computer” / CD-ROM / “Setup.exe to show the page as below:

7. “HD-01 Capture” Program application

7-1 HD-01 Capture operation

- (1) Fix the lens on handy probe, connect the USB to computer and turn on your computer.
- (2) Double click “HD-01 Capture” icon on computer desktop to enter the program.

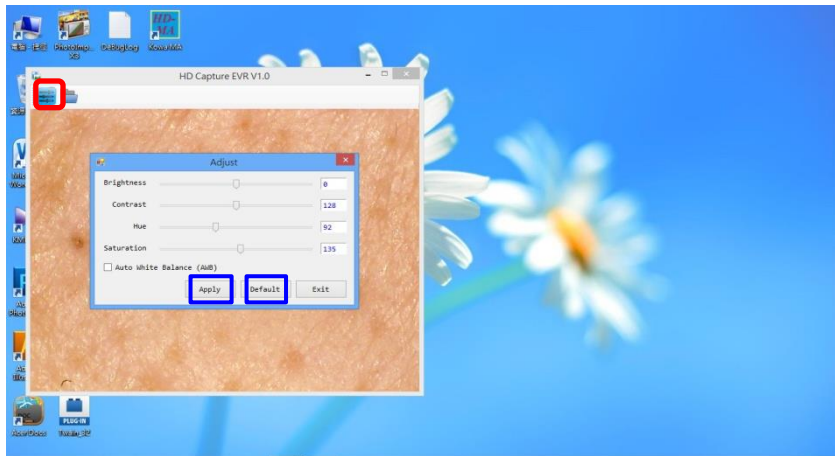

- (3) Lens with a contact type illumination head is intended to be placed on or held just above the viewing object, Then you will get a vivid image on the screen.

(4) Color adjustment

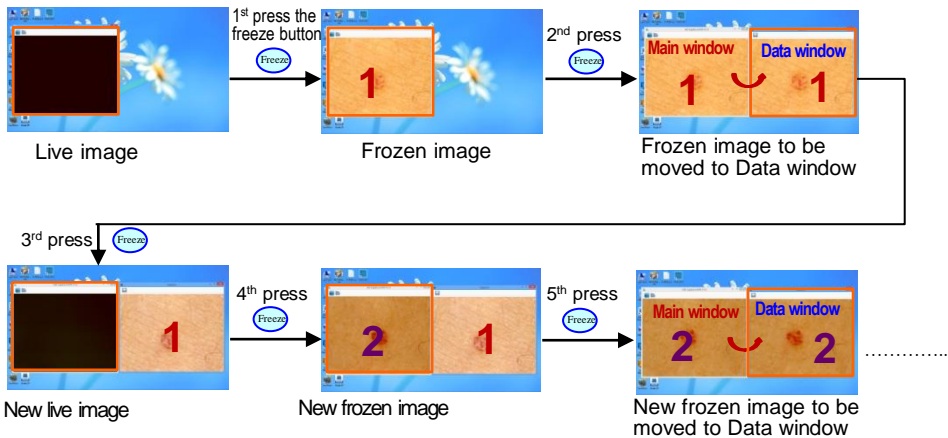

“HD-01 Capture” can offer color adjustment. If you want to adjust the color by yourself. click the icon  from the upper left window, you can change the brightness, contrast, hue, saturation, etc. to your desirable value. Click “Apply” to get your desirable color image.

If you want to change back to the original color setting, you can just click “Default” to get the original color image.

(5) FREEZE / RELEASE function

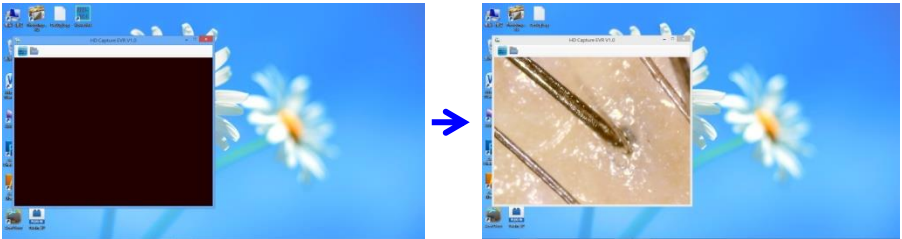

In “HD-01 Capture” the image freeze / release are all controlled by “Frame Freeze” button on the handy probe. Its procedures are as below:

7-2 “HD-01 Capture” Operation / Application

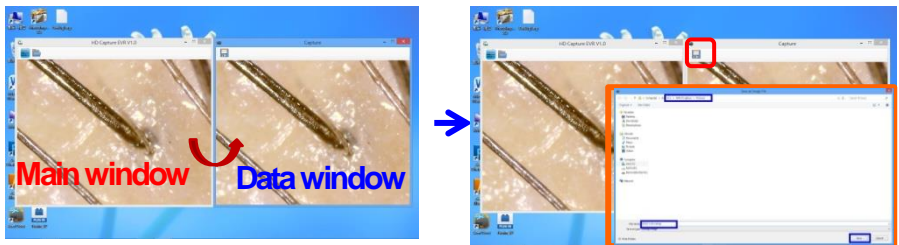

7-2-1 Image Capture / save procedures (640 x 480 VGA mode)

- (1) Double click “HD-01 Capture” icon on computer desktop to enter the program.
Press “Frame Freeze” button to capture the image from the live window.

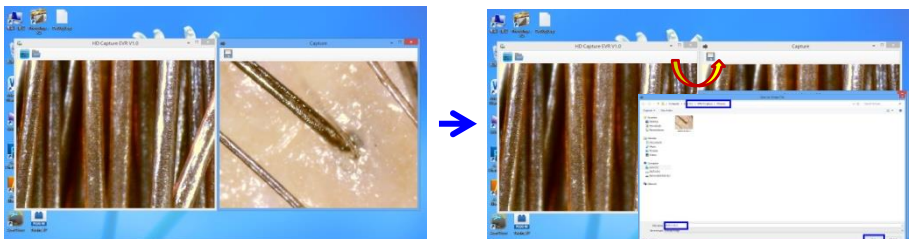

- (2) Press again “Frame Freeze” button and the image will be moved from the left Main window to the right side Data window. Now, you can save the image by clicking  icon on upper left Data window. Please find the folder you want to save, input the file name and press “Save”. Then this image will be saved in “.bmp” type.

(* HD-01 Capture” default path is: C:\ WIN 8 (or WIN 7 or WIN 10) Capture \ Pictures. You can also path & save to your desirable folder.)

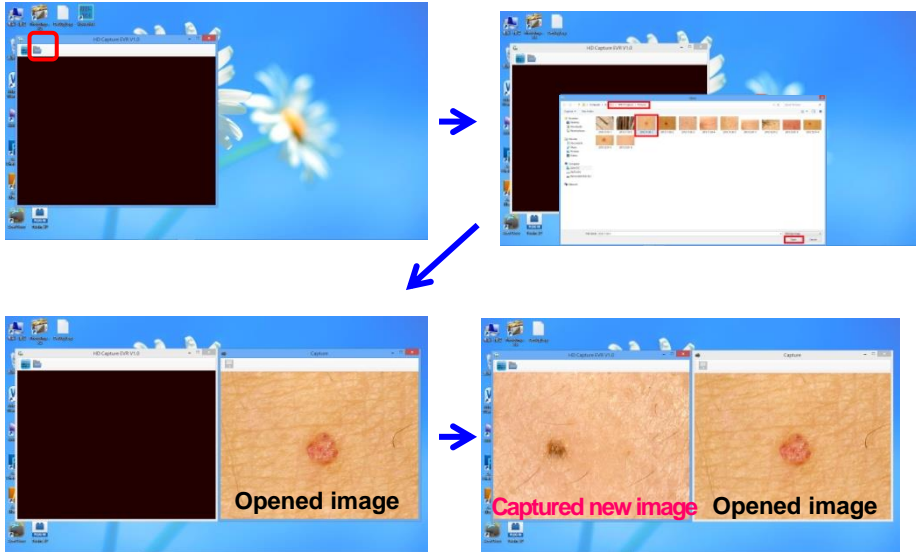

- (3) If you will continue capturing images, press “Frame Freeze” button to release the frozen image (make Main window live), press again to freeze new image and press again to move it the right Data window. Then you can save this new frozen image.

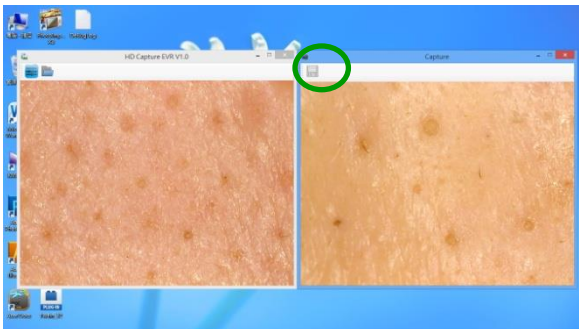

7-2-2 Image comparison

- (1) In “HD-01 Capture” main window you can click  icon to open a saved image to compare the new image you are going to capture.

Find a saved image from the folder and press “Open”.

- (2) Now the opened image appears on the right Data window. You can capture a new image from the live main window to compare these 2 images.
- (3) You can also do the same method to open other saved image(s) to the Data window and capture new image(s) in Main window for comparison purpose.

Remark: In comparison mode,  icon is not available.

*TROUBLE SHOOTING

No.	TROUBLE	SHOOTING
1	I have fixed the lens on HD-01e, but no function.	Check whether the computer is powered on.
2	The control box is powered on, but the handy probe doesn't work (the handy probe cannot offer light).	1). Check if the USB cable on handy probe is disconnected. 2). Check whether the lens is locked to its right position. (Make sure if the lamps inside the lens is light.)
3	No image on the screen.	1). Check whether the control box and computer are powered on. 2). Check if the USB cable between the control box and computer is well-connected. 3). Connect the unit to another computer / screen judge the unit or monitor is out of order in order to repair it.
4	How to clean if I find dust pots on screen?	Take off the lens, you can blow out the dust by using a small air pump or wipe the small glass of the camera (inside the handy probe) with a cotton bar. *Please hold the handy probe toward ground direction to avoid new dusts. If the camera gets mildewed under humid condition, please contact the engineer to clean it.
5	The freeze function cannot work in "HD-01 Capture" or "1-2-4 CAPTURE" program.	1). If you can see live image but cannot freeze it, please exit the program & restart the computer. 2). If you still cannot execute freeze / release function, please change another computer to test. 3). If the condition still keeps unchanged, it's possible the freeze button or the signal connection failed. We will call it back for repair.
6	How to adjust when the image color is out of harmony?	Please adjust following buttons of your screen: (1) TINT (2) SHARPNESS (3) BRIGHTNESS (4) COLOR
7	While using polarized lens to inspect surface skin (or deeper layer skin), why the lower part of screen becomes darker (or brighter)?	It's because you do not rotate the black rubber ring to the bottom of its direction. So some light is covered (or some light is opened). You should completely rotate the black rubber ring of the polarized lens anti-clockwise (or clockwise).
